METAL AND MOLDED CAPS FOR GLASS CONTAINERS

THE SALES APPEAL of an attractive package is strongest when the closure is designed to harmonize with the entire unit. In this catalogue all types of caps are illustrated and described. You may select the one most suitable for your product and container, both from the standpoint of appearance and cost. Ask Owens-Illinois to suggest a completely designed package and be sure of harmony between container, closure and label.

PERSONALIZED CLOSURES FOR MODERN MERCHANDISING

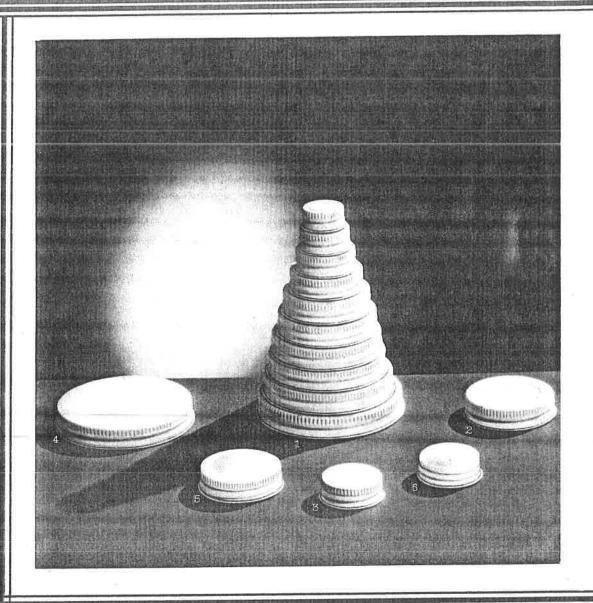

PERSONALIZED CAPS add to the distinction of modern packages. For little or no additional cost your name or trademark may become a part of the closure. When your product reaches the consumer the package is opened. It is re-sealed. It is opened again. This operation is repeated many times until the container is empty. By the use of attractive decoration on the cap your merchandising, or re-selling story is repeatedly told to all of your consumers. Let us be of help in developing attractive designs in permanent colors or by embossing in molded caps. Adopt this effective advertising medium to help build sales.

Caseals & Gripseals

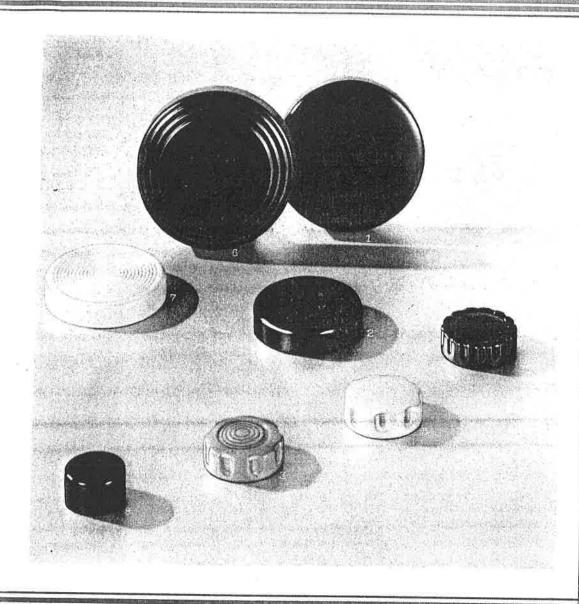

Caseals and Gripseals are nationally recognized as the finest double shell metal caps obtainable. Carefully made from selected materials, the inner and outer shells are assembled by an exclusive method whereby they are firmly interlocked, preventing any possibility of their slipping. Obtainable with inner shells made of tinplate or aluminum, dependent on the product to be sealed, and with any required liner combination. Black coated caps are carried in stock. Other colors or designs can be made to order. The plain round, beautifully proportioned Caseal cap enhances the beauty of any glass container.

The Gripseal with its distinctive fluted design is offered for those who require an unusually tight seal and wish to provide a firm grip for easy removal.

Diagram shows the Caseal Cap's exclusive double shell metal construction with interlocking rolled edge to prevent slipping

C10-16

Molded Caps Private Design

These examples of personalized plastic closures illustrate how cap designs can be distinctive and different. Our design facilities and wide range of special colors make it possible to combine individual treatment in art with a perfect color tone that is in harmony with the complete package.

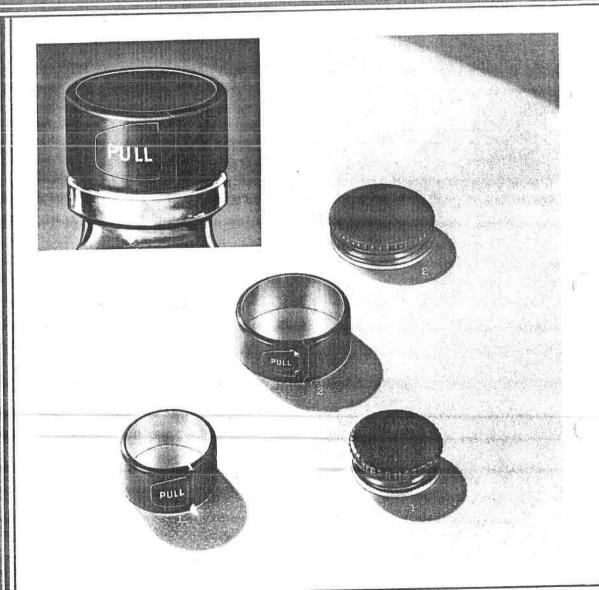

Molded Caps Stock Design

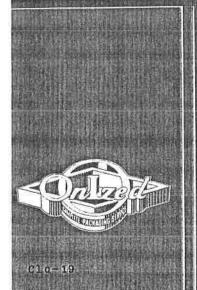

The two stock mold lines shown above are available in all popular sizes and finishes, Lustrseal, with vertical ribs extending to the top of the cap, has already won an enviable position in the molded cap field. The same design, slightly modified, is available in wide mouth sizes. The steady acceptance of our new stock design - Coronet - with rounded panels blending gracefully into the cap top, proves that it fills a modern package need.

The Sentry Seal Tamper-Proof Bottle Closure

- 1. 28 mm GCA 400 Sentry Seal cap and band. This closure may be had with cap and band made of aluminum or tin cap and aluminum band.
- 38 mm GCA 400 Sentry cap and band. Available with tin cap and band only.

The Sentry Seal is simplicity itself — consisting of a special construction C.T. cap and a flanged guard band. Caps are applied in the usual manner and Sentry Guard Bands are placed over them. Packages are then run through our special banding machine and the underside of band is quickly and securely locked under bottle finish.

The Sentry Guard Band completely covers outer edges of cap and is securely locked into the glass finish. Tabs are plainly printed "PULL" and scored so that an effortless pull removes band and completely destroys it.
